Price

£1499 + VAT

The Award winning Afinia H800 is our biggest and best 3D printer, ever!

The H800 has a build envelope of 10" x 8" x 8" which allows users to bring their larger-format designs to life. Not only have we increased the size of the printer, now you can print at an amazingly accurate 100 micron high-resolution detail!

The Afinia ES360 3D Scanner

The new Afinia ES360 3D Desktop Scanner delivers high-accuracy 3D scanning faster than ever before. Using safe, white light scanning, the ES360 Desktop 3D Scanner is easy enough for anyone to use. Just "click" the start button, and the scan process will turn your object into a 3D model that can then be printed on a 3D printer, like Afinia's award-winning H480

or H800. The ES360 is light-weight, at less than 8 lbs, allowing for easy transportation, too.

Two Scan Options The ES360 is the only two-scan-mode scanner on the market. Choose between automatic scan or free scan, depending on your needs and the size of the object. Automatic scan mode allows for a maximum scan size of 215x215x200mm while the free scan mode allows for a maximum scan size of 700x700x700mm.
